# 1. Activation

Upon starting **BLACK & WHITE projects 4** for the first time, you will be prompted to activate the program. Proceed as follows:

Install **BLACK & WHITE projects 4** as described by the installation wizard.

Input your serial number. For the box version, this can be found on the accompanying booklet. If you have chosen to download the program, you will have received the serial number by email directly following your purchase.

EW BLACK & WHITE projects 4 standard	?
22 days remaining.	
Serial Number:	
Please enter your serial number and click "Activate".	
Activate now	Later

Finally, click on the "Activate" button. The software has now been successfully activated!

Note: **BLACK & WHITE projects 4** can be installed on up to two computers using the same serial number.

A second serial number is not necessary. When installing the program on a second device, simply enter the serial number again and press "Activate".

# 2. What's New?

**BLACK & WHITE projects 4** offers many new features. Here is an overview of some of the most important developments:

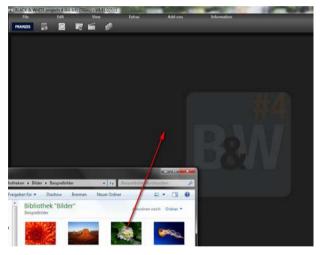

- ✓ New plugin for Lightroom (all versions from LR3 to LR CC)
- ✓ Highlight: selective drawing tools for seven effects with intelligent automatic border recognition
- Highlight spectral sensitivity: highly precise greyscale conversion with brightness adjustment for individual colour tones in the desired grey tones.
- New algorithm browser for an interactive, graphical selection of film emulations, optimisation variations and layerblending modes.
- ✓ Two new preset categories, tinting and FX, for colour shading and special effects.
- ✓ 11 new layer-blending modes (37 in total) for every postprocessing effect.
- ✓ 16 new post-processing filters: denoise colour clouds, denoise banding, horizontal mirroring, vertical mirroring, brightness curve, black & white correction, seasons, time of day, aura, liquefy, chalk drawing, glimmer, lens reflection, fog, polygon, rain showers, snow storm, crosshatching.
- ✓ Additional selective editing for every post-processing effect
- ✓ A history browser shows all edited bracketing and projects, instantly selectable with a single click
- ✓ The intelligent Optimisation Assistant can now be used for eight finely tuned optimisation variations, from natural to brilliant to low-key

- ✓ Nine new effect and high-end tools for new creative possibilities from noise removal to mirroring to aura
- Point of Interest: the chosen effects will only be applied to a specifically definable area, however fully displayed in the chosen section. This function is typically intended for very large, high-resolution photos
- ✓ 115 new and optimised presets with gallery functions
- ✓ Certain presets can now be saved in select categories
- RAW module: developments in black & white corrections and additional high-quality noise removal methods
- Customise program features configure saving formats and automatic settings.
- Image tailoring with 71 format templates and new help tools like the golden spiral, the golden cut and the rule of thirds as guidelines
- ✓ Two-fold speed increase and more

# 3. Photos Done Quickly

You can obtain a finished image in just 4 clicks with **BLACK & WHITE projects 4**.

- 1. Load Images
- 2. Post-Processing Preset Selection
- 3. Optimisation Assistant
- 4. Select Image Detail and Save

You can simply drag and drop your images or bracketing series onto the start screen

How to get the results you want, and fast - the elaborated presets and looks, individual image adaption and selected drawing allow you to also go the creative route. **BLACK & WHITE projects 4** offers both options.

# 4. Importing Image Material

To load an image, simply drag and drop the images onto the start screen. Alternatively, you can also use the toolbar buttons or dropdown file menu.

# 5. Optional: Image Preparation

Click on **Extras/Preparing** image... . Here you can precisely configure the image preparation settings or select the standard settings and turn off the image preparation window which pops up upon uploading photos. For the first steps, select the standard settings. Clicking the back arrow at the bottom left restores any changes made here back to the standard settings, so nothing is irreversible.

a. Colour space conversion: advanced users can choose a colour space here - for all other users, it is recommended to not make any adjustments, to avoid incorrect colour rendering later.

b. White balance: corrects colour casts that occur with shots taken, for example, in a warmly lit room. To start, leave this setting unchanged.

c. The colour temperature ranges from 1000K to 16500K, which makes for a powerful tool for establishing warm and cool moods.

d. The checkbox at the bottom edge of the window allows you to choose if you would like to have this window displayed when uploading images or not.

e. The backwards arrow returns all adjustments back to their initial values.

f. This arrow exits the image preparation and takes you to postprocessing.

# 6. Post-Processing: Presets

A change from previous versions, we are starting directly with postprocessing after uploading the images. Here we can control the picture's tone mapping and edit the results with filters and effects.

Left side of the post-processing screen: the presets show the breakdown of the live preview in categories - "All", "Natural", "Land-"Landscape", "Portrait", "Toning", "Custom", "Surreal", "Architecture", "Artistic", and "FX" with the quantity of presets in the appropriate category.

To begin, we've chosen the "Natural high quality" preset. Clicking on the preview image applies the effect to the image in real time, which will then be displayed in the middle of the screen. Discover the wide variety of different looks by clicking on the 115 different presets. You will be amazed by the intriguing styles in the artistic section!

Image with "FX Gone with the wind" preset

Image after applying the "Portrait strong depth" preset

All 115 **BLACK & WHITE projects 4** presets at a single glance. The "Presets" section can be separated from the rest of the interface by

clicking on the "Default settings" bar, which then allows you to adjust the size of the window as you like.

## > Preview Gallery

Would you like to see all the previews for the loaded image or series? Click on the "All" category.

This very practical feature is reminiscent of good old contact sheets. You can create proofs to assess how the image with your favourite presets would look when printed.

# > Comparison View

Do you want a comparison to the image without tone mapping? Simply right click on the middle of the image to see the before/after result. A quick check on the editing process is available at any time. For an extensive overview with selectable areas and luminance display, click on the symbol bar.

# > Preview Mode

When this option is activated, the result image will appear as a small preview size. If this option is deactivated, the picture will appear in its true size. Please note that processing the preview can take longer when this feature is deactivated.

# Real Time Processing

When activated, all of the changes that you have made to the preset settings will be immediately applied to the image and you will see the outcome of your adjustments directly.

# > High-Quality Display

Activate this option to see the preview image in high-resolution. If the preview is set at 100%, there will be no difference. If you zoom in on a section of the photo however, there is a noticeable difference in quality.

# > Border Pixel Display

The border pixel display helps to reveal areas that tend towards maximal light and dark values, that is to white and black. Dark border pixels are depicted by blue and light pixels by orange.

Depiction of border pixels in dark blue and orange tones

If you would want to brighten this image, you have to be careful of the orange border pixels. Light surfaces in the sky should not become too white, in order to avoid losing detail. In technical terms, these patches are called "burned highlights". The border pixel view helps to find these critical image areas.

# > Combine Presets

To merge two looks together use the "Combine default presets" button directly under the categories. These new presets will be

saved under "Custom". It's that easy to expand your numerous options and accumulate new ideas!

# Name Favourites

Have you found certain presets that you love and instantly want to have handy? Click on the top right star in the preset window and add the

	2	Favourites	; 3	
iii	∃→₿		=+=	
Im	port	@	Export	
0		- no	filter -	

setting to your favourites. By clicking the button, previews all of your favourite presets will be displayed.

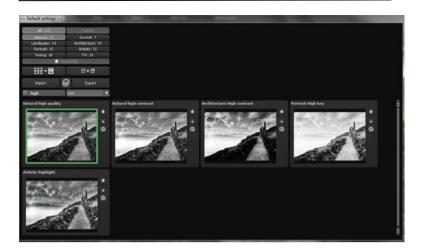

## > Import/Export from Presets

Presets from earlier versions can be easily imported. Do you want to exchange all of your presets with a friend or just secure all of your treasures? Use the practical export function.

# > Filter Presets

Locating presets can be difficult when you have imported presets or created many additional looks. For example, enter "high" into the search bar and only presets relating to "high" will be shown.

# 7. Post-Processing: Finalise

# finalise

Now that we have understood the most important part of postprocessing, let's go onto fine-tuning, which can be found on the right side of the screen under "Finalise". These features are intended to only to be used to edit pictures further after selecting a preset.

## > Point of Interest

Activated "Point of Interest" renders the current editing only to a specially defined area of the image. The effects will be applied in their full form, however only visible in the specified spots, the rest of the image will be left unaffected. This effect is intended for very large, high-resolution photos, for example panorama pictures.

# Greyscale Conversion (Spectral Sensitivity)

Here you'll find the amazing new "spectral sensitivity" feature, which allows you to influence the grey value by selecting a single colour tone to base the conversion on. It sounds complicated, but it is very simple.

#### BLACK & WHITE projects 4 – User Manual

In our example, we have uploaded an image and selected the "naturally neutral" preset to get a natural grey scale conversion. The result is relatively dull, since the red tones have now become a dark grey. The motorcross driver and vehicle do not stand out enough compared to the ground.

We can change this by setting the red control to 70% and orange to 50%.

Ф	🔘 Spectr	al sens	sitivity	
	red			
	0			
	orange	0	%	12
		1-	-	
	yellow	0	%	15
	green			
	®·			
	sky blue	0	%	8
	royal blue		%	
	Toyarbite			
	purple			
	•			
	magenta			
Color filter				
Ф				
0°	Colour tone	180	•	360
weak	Intensity		%	stron

It looks like hours' worth of editing, but it isn't. By specifying the grey values for individual and clearly limited colours, the image's impression can be completely changed, and save you boring, complicated editing time.

# Film Emulation and Preview Browser

**BLACK & WHITE projects 4** includes film looks from the legendary days of analogue film, thanks to its film emulation engine. Rum-

mage through a box of old photos - it's worth it! Select a type of film and its specific colour characteristics, such as grain and contrast film effects, to apply to your picture. You can regulate the intensity of individual features as well as the overall effect of a film look.

# > Colour Filters

You certainly know these filters from the colour filters of the analogue film era, where you had to have the objective in front of you to work. The practical digital filters in post-processing have similar effects, for example a red filter can quickly conjure a dark sky.

A violet filter was applied here to brighten the blue sky.

For colour filters, select either a colour button or choose a colour from the spectrum. The effect's intensity can also be adjusted.

A red filter makes the clouds and sky seem much more impressive. If this leads to image noise, simply apply the new, efficient denoising filter.

## > X Color

The X Color Effect gradually builds the initial colour image step by step back into the edited black&white photo, so that you can create cool vintage or bleach-

X Colo	r	
Ф	HSL illumination	
weak	HSL illumination RGB uniformly	
•-	RGB weighted RGB square	
Local	Colour length	

ing effects. After you are finished editing, give it a try and blend in the original image about 20-30%. The subtle colour tones create a

very modern style. In the above example, the famous Florence Bridge was processed with the "landscape powerful" preset and then 28% colour was brought back into the image with X Color. The original colour image can be seen on the left.

Five blending algorithms are also at your disposal.

# Colour Toning

**BLACK & WHITE projects 4** offers 8 additional colour toning filters that can be extremely creatively used. Colour filters are applied to the entire image and can be added with just one click. Saturation and opacity

can also be set. If you want to make your own filter, simply select a colour from the colour tone spectrum.

Here is an example of four of the eight colour toning filters. Since the toning is transparent, all of the light information remains intact and the images are not darkened.

**Optimisation Assistant** ≻

The optimisation assistant is a very efficient tool for fast, fascinating

results. When the preset is activated, denoising, tonal value, clarity, dynamic and sharpness settings can all be adjusted by sliding the control to the left or right. The result can be seen live. The optimisation assistant is intelligent; it remembers the values you entered, and applies the same settings to the next image in the same way, but tuning the result to the new motif.

If you would like to edit without the assistant, you can simply turn it off. If vou would like to turn off the values that have been "learned" so far, click

on the 🔯

Additionally, the assistant can be given optimising specifications for an entire image style: choose between natural, brilliant, fine, soft, intense, sober colours, high key and low key.

Pro Tip: Remember that the preset specifications and Optimisation Assistant are added together. If you select the "Surreal powerful colours" preset and the "Intense" optimisation, you will get strong, saturated colours and dramatic contrast. Not to worry, you can quickly change back to the "Natural" optimisation and have the familiar look of the "Surreal powerful colours" again. On the other hand, you can compile new creative ideas and jump between intense, unsaturated and high and low key looks lightning fast.

## Scratch and Sensor Errors

Micro-contrast enhancement used in HDR photography unfortunately shows every unwanted sensor imperfection that every photographer, despite internal camera sensor cleaning, knows and dreads. Don't stress - just eliminate them! With the easy to apply correction function from **BLACK & WHITE projects 4**, it can even be fun.

Pro Tip: This intelligent correction doesn't only remove sensor spots, but other disturbing things too - a deserted beach has never been so easy to produce.

Lightly mark defects in your motif, the program will automatically substitute these areas with other appropriate parts of the image.

Here's how to go about correcting:

Select the brush tool under **(6)** and click on the point of the image that you would like to correct. A circle will appear beside it that will serve as a source.

Move this circle to a place on the image that can act as a source for the first marking. The selected area will then be improved based on the source.

Prior to this, you can reveal sensor spots, which will appear as a bright patch in the image, with **(1)**.

(2) allows you to expose or hide the fixed areas. Even when the corrections are still active, even if they have been blended in. Hiding is solely to enable a before and

after comparison.

You can select multiple areas to correct by simply clicking on the brush symbol **(6)** and adding another point.

The button marked **(3)** can blend the targeted corrections in and out, which also controls clarity.

(5) deletes the added corrections.

The section marked **(7)** controls the size of the area that is to be corrected.

You also have the option to automatically search for the best source area for the improvement. Click on the (8) button.

Button **(4)** calculates the appropriate correction spots for all of the points automatically set using **(8)**.

All currently selected corrections can be deleted with the (9) button.

The sensor spots are circled in red

The sensor spot corrector marks all of the patches and determines a source within the image that can be used as a substitute.

Successful sensor spot correction.

## > Post-Processing Expert Mode

The Post-Processing expert mode can be found on the right side of

the screen. Here you can configure all post-processing, try new effects, adjust a selected preset or construct a completely new preset to meet your desires.

## **Overview of the Tools:**

- a) Display Finalisation Assistant as active/not active
- b) Post-Processing Effects (90)
- c) Selected Effects
- d) Settings for Selected Effects

# a) Display Finalisation Assistant

It's worth it to take a moment to see if the changes were made to the settings for the film engine or the optimisation assistant. This way you can check for any unwanted doubled effects.

# b) Post-Processing Effects (90)

The list includes 90 different post-processing effects that can be freely applied and combined.

The effects are divided into six categories, each with a corresponding background colour.

Yellow: border effects Green: geometric effects Turquoise: exposure effects Blue: colour effects Purple: diffusing effects Pink: artistic effects

Tip: If you are looking for a certain effect and know its name or part thereof, you can save time by using the search bar.

When you are applying new post-processing effects, check to see if the optimising assistant is active. If it is, please remember that effects will act differently, and sometimes more extreme. When constructing or enhancing a preset, it is best to turn it off. (Button above post processing).

Overview of Post-Processing filters (90)		
Denoising - banding	Continous tone shading	Gaussian blur
Denoising - contoured	Dynamic brightness	Glamour lighting
Denoising - hotpixel	Exposure centre	Intense radiance
Denoising - multiple	Expose outlines to light	Liquefaction
Denoising - soft	Gradation curve	Radial soft focus
Detail strengthener	Histogram balance	Smooth colour channel
Reduce in-motion blurring	Light tuning	Soft focus - keep details
Reduce interference	Manual black/white point	Warp
Sharpen - fine	Peripheral light distribution	Artistic detail strengthener
Sharpen - Iuminance HD	Soft contrast	Baroque painting
Adjust horizon	Soft details	Brush painting
Airbag distortion	Structure - cracks	Bubble Tea
Correct perspective	Structure - linen	Comci style
Glass panel	Structure - metal	Crayon painting
Horizontal mirroring	Structure - paper	Cubify
Lens correction	Structure - puzzle	Fog
Magnet	Structure - textile	Foil and film
Reduce image area	Structure - waves	Frame
Rotation and zoom	Veiling glare	Hatching
Twirl	Vignetting	Lens flare
Vertical mirroring	Weighted black/white point	Light glow
Add film grain	White & Black correction	Painting
Adjust light/shadow	Colour gradient	Pencil drawing
Automatic black/white point	Fade	Polygons
Balance local contrast	Negative	Posterize
Blach & white	Sepia tones	Rain
Bleach bypass	Time of day	Snow
Brightness control	Aura	Soft relief
Brightness progression	Directional blurring	Solarise
Brightness-Contrast-Gamma	Focus	Wax image

# > c) Select Effects

Have you found an effect that you would like to try out? Simply double click on it in the post-processing effect list.

The effect will now be shown in the block below called "Effects you have selected".

The block of selected effects is the heart of the tone mapping and post-processing area. It includes all of the post-processing effects and the settings for each individual effect.

The filters in the example are automatically applied one after the other to the HDR image and lead to the result tone mapping image.

- To temporarily deactivate an effect, simply click on the box beside the effect's name and remove the checkmark.

- Double clicking on an effect removes it from the list.

- Effects can be sorted at will by

dragging and dropping them up or down the list.

- Tip: The order of the effects within the list can have a substantial effect on the resulting image. It's worth playing with!

- Activate the 360° panorama mode in the bottom left box to prepare your images for a perfect panorama stitching. The images will be optimised, so that no borders can be seen when the panorama is assembled.

- The context menu for the effects you have selected has numerous functions that allow you to activate, deactivate, move or duplicated effects.

# Effects you have selected (7/7) Image: Denoising - contoured Image: Denoising - contoured Image: Denoising - contrast Image: Denoising - contoured <

# > d) Settings for Selected Effects

Settings for the selected effects can be found directly below the block for the effects you have selected. The parameters for the currently selected effects will always be shown here.

The available settings and options change depending on the effect you click on. There are sliders, gradation and mask curves, colours and pipettes etc. Alternatively, a numerical value can be entered into the box above the slider. The example shows the parameters for the "focus vignetting" effect, which consist of slide controls and middle-point alignment. Moving the rulers adjusts the radius and soft focus, which will be immediately displayed in your final image.

The ruler's overflow gives you a direct indication of how the new value will affect your image.

For a portrait, set the effect's centre around the model's nose in order to achieve an accentuated face and a soft background.

# > Example Mask Curves

This curve regulates the intensity of the effect for particular bright areas of the image.

When you pull a point downwards, pixels with this brightness will be impacted less by this specific effect, and vice versa.

For the gradation curve in this example, it means that the lights in the picture will

be brightened, and the dark areas will exempted in order to create a striking contrast. This is how mask curves give you the opportunity to selectively influence images.

During the editing, the preview behind the mask curve immediately shows the effect's intensity from black (no effect) to white (full effect).

# > Layer Processing Methods

These features determine the way that an applied effect appears on a layer. Effects can thus be enhanced or reduced, and looks can even be completely changed, which opens up a plethora of opportunities to play with. To apply processing methods, click on the drop down menu beginning with "Normal".

So that you don't have to try out every single effect, we have a layer mode browser.

With just one click, you have an overview of all of the processing methods and can comfortably choose which method fits the effect best. Give it a try! The effects that you can generate with layer processing methods are astounding!

# > Selective Editing

For every single one of the 90 post-processing effects it is possible to apply the selected effect to only a certain area.

Furthermore, specified areas of an image can be influenced at different intensities by different effects.

The selective editing can be controlled in the parameter area of each effect and you can open the accompanying window with the button at the far left.

At the bottom of this window there are three blocks with six, three and two buttons.

This example precisely shows the "over exposed gradation curve" effect applied to only the selected area. Since 97% rounding has been selected, the section is almost rectangular. Selective adjustments can be very softly blended in.

6 Block: add, remove, duplicate, flip and delete the selected areas

**3 Block:** various display modes for the resulting intensity of the effect

**2 Block:** choice of selected surfaces, very practical if the specified areas are very small or overlapping

You can add up to 32 amplifying (positive) or reducing (negative) areas for the current effect. The size and position can be determined

directly in the image, optionally in the corners or on the sides of the area.

The roundness of the rectangle as well as the sharpness and severity of the selected area can be adjusted with the three controls at the top of the window.

The result will always be instantly displayed upon releasing the mouse button.

# > Overview of Certain Keyboard Shortcuts

Cursor Buttons: move the current, active, selected area

**Ctrl/Alt + Cursor**: fast movement of the current, active, selected area

1,2,3: switch the display mode

Delete: deletes the current, active, selected area

Esc: closes the window

and "Paste" buttons selection again.

Upon closing the window, the chosen effect will only be applied to the selected area and displayed in the middle of the screen.

You can transfer other effects to the selected area with the "Copy"

, without having to retrace the

This button deletes all selected areas for the active filter, of course with a confirmation prompt first.

# Custom Presets

One thing is certain, regardless of which settings you have changed, if you have applied additional filters or adjusted a filter's settings, the selected preset has been modified and to the right of the preview image is the following symbol:

Clicking 🍄 will reset the preset back to its initial state. Careful: All of

the modifications applied up to this point will be undone!

Clicking saves all of the changes in a new preset. A dialog box will open where you can enter a new name for your preset or confirm the suggested one. The system will name it "Copy".

The preset will be saved and moved to the "Custom" presets category. The new preset has been additionally generated and the starting preset is preserved. You can also never overwrite a default preset!

Let's switch now to the "Custom" preset category.

# Here we can find our first custom preset.

There are a few new symbols to the right of the preview image:

ls this the favourite preset that you have made? Mark it to find it right away next time!

Have vou changed this preset and don't want to lose this new look? Then create a new one!

Reset the most recently changed settings for the newest preset.

You have readjusted once again? No problem. Save the changes with the disk symbol.

Change the preset's name.

You can also delete your custom preset entirely.

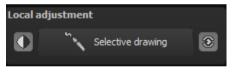

Use this to enter a search filter. For example, enter the search filter "high", and subsequently type the term into the search filter bar directly under "Import". All presets with this search filter will be displayed. You can enter the names of places you've holidayed and all of the presets that you used for those specific holiday photos will then be easy to find and to apply to other pictures. The filter drop down menu to the right already contains "high", and you can simply select it from the entered search filters.

# 8. Local Adjustments and Selective Drawing

The new highlight tool from **BLACK & WHITE projects 4** deserves very special attention. Firstly, this tool selectively edits chosen areas without complicated masks done by hand, like other photo editing programs. **BLACK & WHITE projects 4** includes a completely newly developed intelligent border recognition algorithm, that independently identifies borders, lines, differentiations and light differences in drawing mode. The boundaries of the area that the mouse skimmed over are saved as a mask. These easily and precisely set masks serve as the basis for 8 important image enhancements: "Shading", "Illuminating", "Back to previous colour", "Intensifying colour", "Reduce colour", "Strengthen details", "Reduce details" and "Sharpen". A mask can even be saved as its own image file and used in other photo editing programs.

It's easiest to see how the whole thing works through an example image. First, let's open the selective drawing window (postprocessing/finalise - bottom right). Our example is a single RAW file of a typical holiday shot. The image's colour information has already been well edited and balanced. Now we want to brighten the clouds above the chairs, so that the scene doesn't look as menacing and to avoid pulling focus from the primary subject. The chairs should not be brightened, so as keep their intense colours.

Select editing objective 1.

For this case, select "Illuminating". Make sure that the selected mask function is activated and the green checkmark is showing.

Activate drawing mode 2.

3. Activate filling mode

4. Run the mouse over the contours without clicking. You can decide

and correct the brush size afterwards.

5. Now look at the mask display. The object where the borders were automatically recognised is now depicted. Click and hold, and then trace your mouse along the edges of your chosen object until it is completely selected. In the blink of an eye we will see the effect as well as the overlying mask.

6. Once fully selected, blend the mask out by moving the mask intensity control to the left.

Now you only see the effect, that is, the brighter grassy area

 our objective was "Illuminating". Now you can adjust the
 intensity of the effect by sliding the control towards the + or
 -, according to your preferred strength. Done! The grass has
 been brightened, while the sky and church have not been
 touched

8. Click on "Close". You will be returned to post-processing and the selective change will be applied.

The lawn is noticeably brighter following the selective correction. The sky still has the same tone values as before.

- 9. Use your quickly made mask for a further effect. Go back to the selective drawing. Our selective mask has remained. Click on and copy the mask to the clipboard. Switch the mask to "Sharpen" and use the to paste the mask back again. Now you have sharpened just the rocks, and the other parts of the image were not influenced.
- 10. Every selectively applied effect can be activated and deactivated with the green checkmarks.

11. Borders have different intensities in every image. Presets normally do just fine, but sometimes it is necessary to adjust the contour and sharpness settings in order to reach perfect fine-tuned results.

12. Have you drawn outside of the lines, despite the border recognition? You can easily remove it with the eraser.

If you only want to remove a small section, use the eraser with limitation. When set to 50%, you can only remove 50% of the mask, regardless of how much you erase. The limited drawing mode works in the same way, and only draws at a certain opacity.

13. If you want to mask the entire image except for a small object, it is a good idea to mask only the small object and then reverse the mask by clicking on the .

Pro Tip: You have two filling modes to choose from when you want

to fill a mask. When do you use which mask? We used the normal fill mode as in our example for a large surface, which is also preferred for water and sky areas.

Ray filling mode **N** is very precise and favoured for smaller objects, geometric forms or subjects with straight lines, like

in our example here. In this example, the church steeple and roof are masked in order to brighten these sections.

The finished image - the selective adjustments are perfectly carried out without a hint of having been edited.

## 9. Workflow

### > Edit final image further in an external program

**BLACK & WHITE projects 4** offers interaction with external programs. That way you can take a successful image result to another photo editing program and continue there.

### > Open in other *projects* programs

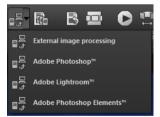

Click on the "Projects" symbol in the toolbar to open the image in a different program from the *projects* series. Use the drop-down menu beside the symbol to choose one of the programs that you already have installed on your computer.

### > Open in other photo-editing programs

To directly open the image in another photo editing program, such as Adobe Photoshop, click on the corresponding button in the symbol bar.

If necessary, go through the settings to show the path to the program. Click on

"Extras" in the menu and select "Settings" in the drop-down menu:

Next, click on the "Export" tab. You can enter the name of a photo editing program here, and save it for later as well.

cternal programs			
Export formats:	TIFF 16-Bit (*.tiff)		💋 Save exported files under the original path
File-Prefix:	File-Suffix:	HDR projects	-> File name_HDR projects.tiff
External image processing			
■ Adobe Photoshop™			
■ Adobe Lightroom <sup>™</sup>			
Adobe Photoshop Elements			

#### > Work with a timeline and restore points

This option can be found in the symbol bar at the top edge of the screen:

"Create Restore Point" saves an in-between point of the current settings. You can now always return to this stage of your editing. You can save as many editing restore points as you like. The timeline displays the restore points and makes it possible to call up any phase with just a single click:

This function is especially useful when, for example, you are satisfied with an image, yet want to continue trying out different settings and effects. Simply set a restore point and carry on editing your picture. If you want to go back, simply click on your restore point in the timeline.

# 10. Selecting and Saving Sections of Images

To save a final image, click on the button in the toolbar, go through the file menu or use the corresponding keyboard shortcut (Ctrl+S).

#### > Cropping and captions

As soon as you have initiated to save a file, the cropping and caption window will open.

At the top are several practical aids for perfect image composition and cropping.

You can set the aspect ratio and activate guidelines like the rule of thirds, the golden section or the golden spiral.

The centre of the window shows your final image. Fix the area to be saved by adjusting the corners and borders of the photo.

At the bottom is an option to enter a caption. You can determine the size, position and background for the text. The size of the text will be automatically coordinated to the final cropping.

You can either crop free-handedly or use one of the 71 provided formats.

	Free cropping
e.g.	Free cropping
las	Set up personal aspect ratio
us	Photo (10 x 7)

Please note: If you choose the cropping, e.g. 13 x 18, the final image will not be saved as 13 x 18 cm, rather as a <u>ratio</u> of 13 to 18.

As soon as the image has been cropped and captioned, confirm the save and the following window will prompt you to select a file format and name your file.

# **11. RAW Processing**

You can upload and edit RAW image data with the integrated RAW mode. Numerous tools are available to you here, such as denoising/sharpen, exposure, colour, detail and powerful distortion capabilities.

Interfering chromatic aberration can be easily removed in the "colour" category.

An overview of the most important RAW functions:

#### White balance:

Here you can regulate the colour temperature. Use the pipette to select a white balancing colour directly from the image.

#### Denoising/sharpness:

This feature regulates the image's noise and sharpness. Control the quality and different types of noise such as colour noise, banding or hot pixels.

#### Colour balance/white balance:

Here it's all about colour and black/white correction. Modify the general colour mood and neutralise white and black - the icing on the cake for professional colour correction.

#### Exposure:

Influence lights, shadows, contrast and brightness in the final image.

#### Detail:

Fine-tune clarity and micro-details with lights, shadows and mid-tones.

#### Colour:

These colour settings are all about the luminosity of lights and shadows. You can even reduce the presence of unwanted chromatic aberrations.

### Palate:

Adjust the saturation of individual colours.

#### Distortion:

Take a closer look. These mighty tools can straighten out the horizon, correct camera angles and lens errors. Use "Autofit" to automatically trim any awkward borders.

#### General:

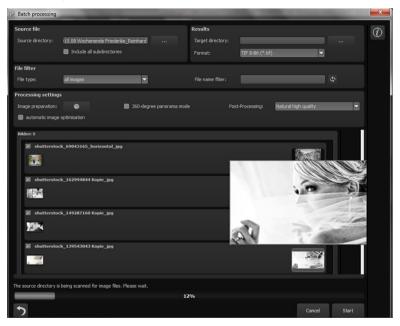

Activate the "360° panorama mode" to optimise matching edges of images in a panorama series.

Save your settings as a camera profile to save time in the future. This can be reset at any time.

# 12. Batch Processing

**BLACK & WHITE projects 4**'s batch processing allows for automatic processing of multiple bracketing series. The function can be found in the drop-down menu for **"Extras"** in the menu bar.

Note: Remember that looking through folders with several subfolders can require a lot of time. That's why selecting "C:\" is not recommended.

Results: Here you can set where the resulting images of the batch processing will be saved. Select the corresponding folder with the "Target directory (. . .)" button or enter the name of the folder directly into the text box. Format: You can choose from five different formats to save your resulting images. In form of .jpg and .tif, there are two 8 -bit formats and two 16-bit formats, as well as one png format. JPG images are always the highest quality and TIF files are saved uncompressed and without defects.

Batch processing	1000				1000	1000	-	
Source file				Results				
Source directory:				Target directory:				
Allocation:	Automatic all	ocation		Format:	TIF 8-Bit (*.tif)	-		
	📕 Include al	l subdirectories			Sort mode			
File filter								
File type:	al images			File name filter:				
Processing setting	] <del>5</del>							
Preparing HDR	۵	IDR default settings:	Entropy (soft)	-	Post-Processing:	Natural balanced		
360-degree par	norama mode			automatic image of a state of	optimisation	Natural balanced Natural sharp Natural back light		•
Exposure bracket	ing					Natural Bright back light Natural Dark back light		۲
	ctivate all exposi	ure bracketing	Deactivate all ex	posure bracketing	Re	Natural highlight details Natural brighten		
						Natural details brightene Natural powerful colours		
						Natural fine detail Natural Sunny		
						Natural fresh Natural dynamic		
						Natural bright lights Natural deep shadows		

Editing settings: Choose which filters of the batch you would like to apply. From here you can also access image preparation and select presets to be administered to the image. If you would like to later assemble the edited images into a 360 Panorama, select panorama mode to eliminate exposure and contrast edges in the individual images.

**Tip:** It is better to select a preset from the "natural" or "landscape" categories if you have a large number of images to process at once. Extreme effects are better suited to individual images.

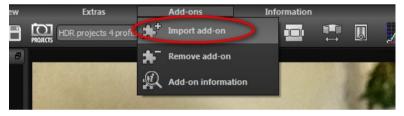

# 13. Add-ons

With help from add-ons, you can not only import presets, but entire post-processing modules can be integrated, which can be necessary to create new preset looks.

1. Extract the files from the downloaded zip folder: **Preset-Collection-BlackWhite-projects-Frames.zip** 

#### 2. Open your BLACK & WHITE projects 4 version

3. Click on Menu → Add-ons → Import Add-ons

4. Select **Black&White projects Frames (16)** in the following dialog window, open it with a double-click and select the **BLACK & WHITE\_Frames.praddon**. Then click "Open".

5. The add-on will now be imported. A confirmation message will appear:

6. Please close and restart the program to be able to use the add-on with all of the other presets.

7. Open **BLACK & WHITE projects 4** and load an image. Switch to post-processing mode (palate symbol). If you are the owner of **BLACK & WHITE projects 4**, you will automatically be sent to post-processing

mode. Select Menu  $\rightarrow$  Add-ons  $\rightarrow$  Add-ons Information, and confirm that your filter package was successfully activated.

8. Filter selection can be found on the left-hand side, directly under the import/export buttons.

>> Default settings <<		
All: 115	Custom	
Natural: 13	Surreal: 7	
Landscape: 14	Architecture: 14

Toning: 18	FX: 19	
📩 Favourites		
₿₽₽₽	=+=	
Import (	Export	
0.	- no filter - 🔍 🔻	

Here only the new, recently imported presets are displayed.

9. Click the arrow to open the drop-down menu and select "Frames". Now exclusively the new presets will appear on the left display box.

14. If you would prefer to not filter the presets, the new presets can be found in the "Artistic" category.

# 14. Plug-in Installation

**BLACK & WHITE projects 4** can also be used as a plug-in for Adobe® Photoshop. Newer versions of Photoshop are automatically detected by **BLACK & WHITE projects 4** during installation and the plug-ins are installed in the respective plug-in folder. Older versions of Photoshop might require manual installation.

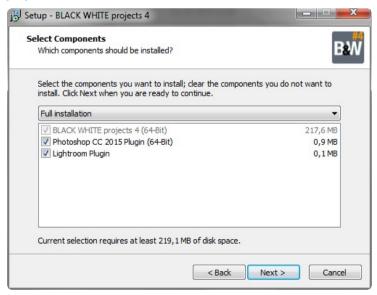

If you purchased your software as a download or if you have lost your CD, the plug-ins are also available for download at:

www.projects-software.com/plugins

## Using plug-ins with Windows

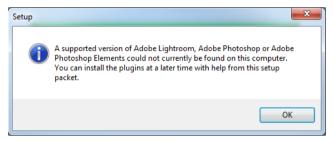

### Adobe Photoshop & Adobe Photoshop Elements

The following window will appear when installing **BLACK & WHITE projects 4**:

Select the version of Photoshop where you would like to install the **BLACK & WHITE projects 4** plug-in. Click on "next" and follow the instructions from the installation assistant. The plug-ins will then be automatically installed.

If your version of Photoshop is not automatically recognised, the following notification will appear:

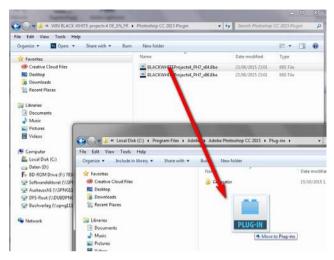

In this case, the plug-in must be manually copied into the "Photoshop Plug-in Folder". Click on "Open Plug-ins Folder" on the start screen. Windows Explorer will then open with all available Photoshop plug-ins.

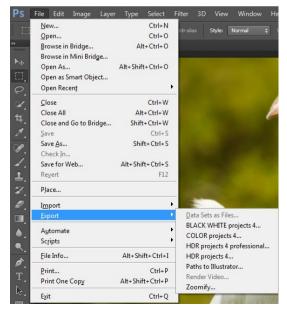

Open the folder for your version of Photoshop and drag & drop the plug-in found in this

folder to the Photoshop plug-in folder, which normally can be found through "Programs  $\rightarrow$  Adobe  $\rightarrow$  Adobe Photoshop  $\rightarrow$  Plug-ins". The plug-in can also be copy & pasted into the Photoshop plug-in folder.

Finally, the plug-in can be found in Photoshop through "File  $\rightarrow$  Export  $\rightarrow$  BLACK WHITE projects 4".

### Using plug-ins with Mac OS X

#### Adobe Photoshop & Adobe Photoshop Elements

Plug-ins can be found on the start screen in the "Plug-ins" folder. Select the appropriate folder for your version of Photoshop (we chose Photoshop CS6 for our example). Double click the .zip file to extract the plug-ins.

Next, drag & drop the plug-in to the plug-in folder for your version of Photoshop, which is normally labeled as "plug-ins":

Start up your version of Photoshop, load an image and navigate to "File  $\rightarrow$  Export  $\rightarrow$  BLACK WHITE projects 4". One click will start the plug-in. The image will now be opened in **BLACK & WHITE projects 4**.

### Adobe Lightroom with Windows

For Adobe Lightroom, it is often the case that plug-ins are not automatically installed. Continue as follows:

Copy the plug-in folder "Lightroom Plug-in" from your CD-ROM.

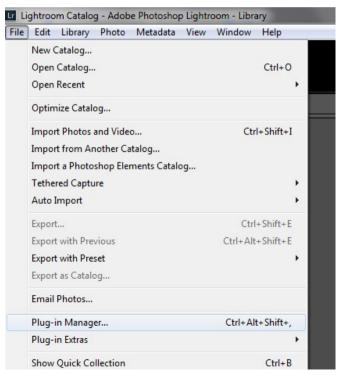

If you have no CD, the plug-in is also available for download at: <a href="http://www.projects-software.com/plugins">www.projects-software.com/plugins</a>

Paste the folder where you want it to be located.

We recommend the folder where also your presets are stored:

#### C:\Benutzer(Users)\username\BlackWhite Projects 4.

Start Lightroom und navigate to "File"  $\rightarrow$  "Plug-In Manager".

Click the "Add" button in the Lightroom Plug-In Manager.

•	Canon Tesher Plugin Installed and running Facebook Installed and running Flicks	Status     Path: C:\Program Files\Adobe\Adobe Lightroom(pether_canor     Show in Explorer_ Version: 6.2.1.104594	Jiplugn
9	Installed and running Leica Tether Plugin Installed and running	Status: This plug-in is enabled.	Disable Disable
9	Nikon Tether Plugin https//dianafinuncing	▶ Plug-in Author Tools	No diagnostic messages

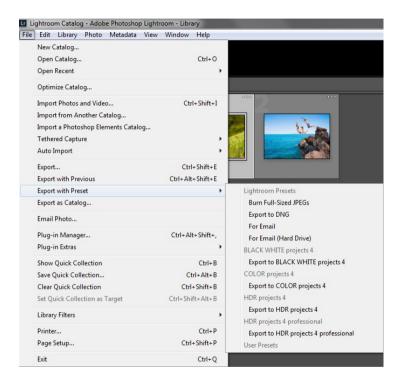

Navigate to the appropriate Lightroom plug-in for **BLACK & WHITE projects 4** that you just added to your PC.

Click on "Select Folder" and then "Done".

In Lightroom, the plug-in can be found through "File  $\rightarrow$  Export with Preset  $\rightarrow$  Export to BLACK WHITE projects 4".

#### ALTERNATIVE:

Right-click on the image directly in Lightroom and select "Export  $\rightarrow$  Export to BLACK WHITE projects 4".

### Adobe Lightroom with Mac

For Adobe Lightroom, the plug-in will not be automatically installed. Continue as follows:

Install **BLACK & WHITE projects 4** to the program link of your Mac.

Copy the plug-in .zip file from the "Lightroom Plug-in" folder on your CD-ROM. Double click on the .zip file to extract the plug-in to a folder where you want it to be located.

We recommend the folder where also your presets are stored:

### C:\Benutzer(Users)\username\BlackWhite Projects 4.

Start Lightroom und navigate to "File  $\rightarrow$  Plug-In Manager".

Click the "Add" button in the Lightroom Plug-In Manager.

Navigate to the appropriate Lightroom plug-in for **BLACK & WHITE projects 4** that you just added to your PC.

Click on "Select Folder" and then "Done".

Sometimes it can be necessary to close Lightroom and then to restart. Afterwards, the plug-in will be installed and activated.

There are more ways to export your image from Lightroom to **BLACK** & WHITE projects 4:

"File  $\rightarrow$  Export with Preset  $\rightarrow$  Export to BLACK WHITE projects 4".

#### ALTERNATIVE:

Right-click on the image directly in Lightroom and select "Export  $\rightarrow$  Export to BLACK WHITE projects 4".

### Photo credit:

Imagery provided by the members of the FRANZIS *projects* team and the programmers.

Special thanks to Mr. Falko Sieker for providing several exposure bracketing series and single images for testing purposes. The majority of the screen shots found in this user manual are results of Mr. Sieker's bracketings.

# 16.Support

If you have questions regarding the installation, problems or errors of the software, please contact the **FRANZIS customer support team**.

#### Contact: http://www.projects-software.com/contact

Please understand that your questions can only be answered directly by FRANZIS customer support. This is to give us the opportunity to constantly enhance our customer service for you and to make sure that you receive only the most qualified answers to all of your questions as fast as possible.

#### This is how our customer support works best:

Please have the most important details about your computer and about our product at hand when you call our customer support. These include:

- Name of the product
- Product ISBN (which you can find on the back of the packaging, above the easy to spot barcode).
- Operating system of your computer
- Technical details of your computer including all your peripheral devices
